

Appendix A: Technical Summary of Technical Findings

Purpose of the Study

The purpose of the study, as set forth by the Executive Order, is to provide a clear and consistent set of information to inform the public and the State of Michigan's energy and economic future. The study will provide information on the potential impacts of offshore wind energy on the environment, including impacts on the environment, the economy, and the community. The study will also provide information on the potential benefits of offshore wind energy, including impacts on the environment, the economy, and the community. The study will also provide information on the potential impacts of offshore wind energy on the environment, including impacts on the environment, the economy, and the community. The study will also provide information on the potential benefits of offshore wind energy, including impacts on the environment, the economy, and the community.

The study will provide the following information: (1) a description of the offshore wind energy industry, including its current status and potential for growth; (2) an analysis of the potential impacts of offshore wind energy on the environment, including impacts on the environment, the economy, and the community; (3) an analysis of the potential benefits of offshore wind energy, including impacts on the environment, the economy, and the community; (4) a description of the potential impacts of offshore wind energy on the environment, including impacts on the environment, the economy, and the community; (5) a description of the potential benefits of offshore wind energy, including impacts on the environment, the economy, and the community.

The findings of the study will be used to inform the public and the State of Michigan's energy and economic future. The study will also provide information on the potential impacts of offshore wind energy on the environment, including impacts on the environment, the economy, and the community.

Available Data and Analysis

The study will use the following data and analysis: (1) a description of the offshore wind energy industry, including its current status and potential for growth; (2) an analysis of the potential impacts of offshore wind energy on the environment, including impacts on the environment, the economy, and the community; (3) an analysis of the potential benefits of offshore wind energy, including impacts on the environment, the economy, and the community; (4) a description of the potential impacts of offshore wind energy on the environment, including impacts on the environment, the economy, and the community; (5) a description of the potential benefits of offshore wind energy, including impacts on the environment, the economy, and the community. The study will also provide information on the potential impacts of offshore wind energy on the environment, including impacts on the environment, the economy, and the community. The study will also provide information on the potential benefits of offshore wind energy, including impacts on the environment, the economy, and the community.
