

As a teacher, you are responsible for the "content knowledge bank" at the School Community Health Centre (School Health Centre) in your community. To do this, you study regularly for your field information from the various sources (journal).

This information is used for teaching groups using the available source in our own health unit.

In December 2020, with the help of health workers and the health team, our health workers used the available information to provide health services to the community. The available source was health and health care workers.

Community health workers meeting

Activity 2: The teacher groups shared the preliminary findings of the survey study on the community health workers' knowledge and skills. They made long lists of knowledge and skills. They also discussed using the information to improve their health unit during the visitation for each grid. The

survey findings, and the community health workers' knowledge and skills were used to improve the health unit during the visitation for each grid.

Activity 3: The teacher groups visited the community health workers' groups to discuss the preliminary and final findings of the survey study and to discuss the community health workers' knowledge and skills. A teacher at the community health unit was the facilitator. The community health workers discussed the preliminary and final findings of the survey study, and they discussed the community health workers' knowledge and skills. They also discussed using the information to improve their health unit during the visitation for each grid.

Survey findings: The community health workers' knowledge and skills were used to improve the health unit during the visitation for each grid. The community health workers' knowledge and skills were used to improve the health unit during the visitation for each grid.

Use: The community health workers' knowledge and skills were used to improve the health unit during the visitation for each grid.

Community health workers' knowledge and skills: The community health workers' knowledge and skills were used to improve the health unit during the visitation for each grid.

Use: The community health workers' knowledge and skills were used to improve the health unit during the visitation for each grid.

Community health workers' knowledge and skills: The community health workers' knowledge and skills were used to improve the health unit during the visitation for each grid.
